Onit Partners with WorldGate to Offer Video Phone to Business Users

Dallas (December 1, 2006) – ONIT Communications, Inc., a provider of IP communications products and services including business class Voice-Over-IP (VoIP) and hosted pbx solutions targeted to small and mid-sized business customers today announced that it will begin selling the WorldGate Ojo Personal Video Phone to it's customers in North America.

"The Ojo Video Phone fits in well with our best-of-breed product line by providing true 30 frame-per-second real time video performance over IP networks," said Darren Vader, ONIT Director of Marketing. "We believe that the Ojo product line provides a superior form factor, a market leading price point, and most importantly a video delivery technology that is far superior to alternate personal video phone solutions."

Ojo is the first broadband video phone to feature a friendly and intuitive display that facilitates realistic, face-to-face, personal communications experiences over IP-based broadband networks. Customers can simply connect their Ojo video phone to their broadband networks to experience true-to-life video phone calls.

According to ONIT President Daniel Scofield, "IP video technology can impact a business in far greater ways than simply reducing travel cost. The Ojo Video Phone makes communication personal again. It has the ability to improve collaboration and cooperation among employees. These are very real and tangible enhancements in communication that can positively impact all businesses. It's one more example of how ONIT is delivering the power of IP communications."

About ONIT Communications

ONIT Communications provides businesses with the ability to efficiently manage cutting edge technology convergence. VoIP phone systems, hosted PBX, IP video surveillance and conferencing, CRM tools, media management, email and web site hosting and custom IP-based technology solutions – all running across the Onit managed network environment. If you can imagine it, Onit can deliver it. Real Service. Real Support. Real Simple. For more information, please visit our web site at www.ONIT.com.

ONIT Communications to Host IPcelerate VoIP Solutions

DALLAS, November 14, 2006 – IPcelerate, Inc., a provider of advanced communications-based software applications, announced today the signing of a partner agreement with Onit Communications, Inc, a national provider of managed IP communications products and services including business class hosted pbx solutions. Onit Communications is the first partner to offer both a hosted version and an on-site managed network version of IPcelerate products.

“This relationship is very important to us as we continue to grow our business and expand into new markets. Onit’s business model allows targeted market segments to utilize our business-impacting VoIP solutions without incurring significant up-front hardware expenses and/or increasing their overhead with an in-house IT department,” stated David Stixrood, Vice President of Channel Development for IPcelerate. “Our partners help us define new business solutions that drive future product developments. We look forward to working closely with Onit to enhance our IPsession and IPstudio platforms, incorporating hosted services.”

“Every now and then you come across a company or product that just tells you ‘they get it’. Our relationship with IPcelerate brings together two organizations that understand the importance of creating value for customers,” stated Dan Scofield, President of ONIT Communications. “We believe the real revolution in business communications will come from companies which recognize the power of IP to provide businesses with real, sustainable value. IP communications is about more than just a dial tone, and IPcelerate’s products provide us with proven IP-based applications that enhance our ability to provide real solutions for our customers.”

About IPcelerate

IPcelerate, Inc. is a Dallas-based VoIP solutions provider that helps companies “Get More” from IP telephony. IPcelerate's suite of solutions is designed to accelerate the Return-on-Investment (ROI) from an IP telephony installation by focusing on improving business processes. Examples of business impacting solutions include: personnel safety, improved employee productivity, asset protection, supply chain management and increased situational awareness. Additionally, IPcelerate's advanced applications broaden VoIP solutions by enhancing basic telephony functions and converging the VoIP environment with existing systems and technologies. For more information, please visit our website at www.ipcelerate.com.

ONIT Sponsors 18th Annual North Texas Golf for SIDS Fundraiser

Fort Worth (October 9, 2006) – ONIT Communications, Inc., a provider of IP communications products and services including business class voice-over-ip (VoIP) and hosted pbx solutions targeted to small and mid-sized business customers, today announced it's sponsorship of the 18th Annual North Texas Golf For SIDS fundraising event hosted by Shady Oaks Country Club and the Alliance for Infant Survival.

Launched in 1994 as the North Texas SIDS Alliance, the Alliance For Infant Survival, Inc. was formed by parents looking for help after the losses of their babies to SIDS, or Sudden Infant Death Syndrome. Support groups and peer contact programming now provide a crucial network of compassionate comfort across North Texas.

Now in its 18th year, the Golf for SIDS tournament acts as both a fundraiser and a SIDS awareness event for the Alliance for Infant Survival. As a Pro Tour sponsor, ONIT joined more than 40 other organizations in helping to raise community awareness of SIDS. Master of Ceremonies Jody Dean of radio station KLUV-FM 98.7 provided an entertaining and enlightening presentation during the tournament introductions, presentations and awards ceremony while special guest Dr. Martin Sokol of the First Candle/SIDS Alliance provided additional insight into national efforts working to spread SIDS awareness and support.

"I think it's very important for companies to be involved in their communities," said Dan Scofield, President of ONIT. "Beyond being the right thing to do, most business people will tell you that is also very good for their business. We had a great time at the event, met some wonderful people and look forward to participating next year."

About the Alliance for Infant Survival

Based here, the Alliance for Infant Survival is a non-profit organization with a focus on promoting healthy babies and young children through education, advocacy and medical and scientific research, and to embrace families touched by the sudden, unexpected or accidental loss of a child from birth to age two. For more information or to make a donation, please see our web site at www.infantsurvival.org.

ONIT Names Daniel Scofield President

DALLAS (May 1, 2006) – ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services targeted to small and mid-sized business customers, today announced the appointment of Daniel Scofield as President. This appointment is in addition to Scofield's ongoing leadership as Chief Operating Officer.

Prior to assuming his new position as President, Scofield directed the companies operations where he helped successfully integrate ONIT's recent acquisition of ICG Communications business customers in the southeastern and west cost regions and has successfully implemented improvements in all areas of ONIT's business. In his diverse 25-year career, he has developed successful technology programs, turned around troubled business operations, developed awarding winning products and marketing strategies, assisted companies through industry transitions and spearheaded major technology and business projects throughout the world.

"Dan has been instrumental in improving operations and implementing new business processes that have significantly increased our ability to delivery quality communication services to our customers." said C. Douglas Bauer, Chairman of the Board of ONIT. "The improvements that Dan has made allowed the company to enhance its competitive position. We have set out a very aggressive growth plan and we believe Dan is the ideal person to lead this effort."

As a 2005 MBA program graduate of Tulane University A.B. Freeman School of Business, Scofield brings together current academic thought with a real-world set of business experiences that few senior executives can boast.

"The IP communications industry is continuing to evolve and company's like ONIT must be ready to meet these challenges," said Mr. Bauer. "We are ready to meet these challenges and with Dan at the helm, the future is very bright for ONIT."

About ONIT Communications

ONIT Communications provides hosted VoIP solutions and Web services to business customers. ONIT TruVoIP leverages a powerful Internet Protocol (IP) network combined with IP telephony applications and superior service to offer integrated, feature- rich voice and data communication services at an affordable price. ONIT Acquires ICG's California Business VoIP Customers

DALLAS (February 7, 2006) – ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today announced it has acquired the corporate VoIP customers of ICG Communications (ICG), Inc. in California. This marks ONIT's third acquisition of a regional group of ICG business customers in less than twelve months. ONIT acquired ICG's Southeast regional and Texas-based customers in 2005. The addition of ICG's business VoIP customers in California shows ONIT's continued success in executing its growth strategy.

"The migration of ICG VoicePipe customers to the ONIT TruVoIP service has been extremely successful strategically" says Dan Scofield, ONIT's Chief Operating Officer. "The addition of ICG's California-based business customers has provided ONIT with new serviceable markets on the west coast and helped us continue our national service roll-out."

ONIT offers business customers a package of broadband telephony and high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent cost savings over traditional PBX offerings. Additionally, the company's full-featured TruVoIP solution is designed to ensure new customers experience a smooth transition from traditional PBX phone service to IP telephony without interruption to their day-to-day business operations.

About ICG Communications

ICG Communications, Inc. is a Colorado-based telecommunications company that provides voice and Internet services to businesses, government agencies and resellers doing business in Colorado and Ohio. With its extensive network, ICG Communications delivers better bandwidth through fiber that is close to its customers. ICG products and services include VoicePipe™, ICG's hosted VoIP product; iConverge™, ICG's converged voice and data product; dedicated Internet access (DIA); PRI; Long Distance; Ethernet transport services; and private line transport services. ICG provides flexible and reliable services to carriers, ISPs, VARs, government agencies, Fortune® 500 companies and small- and medium-sized businesses. ONIT Acquire's ICG's Southeast Region Business Customers

DALLAS (December 1, 2005) – ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today announced it has acquired the corporate VoIP customers of ICG Communications (ICG), Inc. in Alabama, Georgia, North and South Carolina and Tennessee. This marks Dallas-based ONIT's second acquisition of a regional group of ICG business customers. Earlier this year, the company acquired Tel West Network Services' corporate customers in Texas, former ICG customers, adding a mix of small and mid-sized businesses, Fortune 1000 companies and municipal government agencies to ONIT's fast-growing subscriber base. The acquisition of ICG's VoIP customers in the southeast region makes ONIT the dominant provider of IP telephony to small and mid-sized businesses in the southern half of the United States.

ICG customers can expect a seamless transition, according to Kathleen K. Hanafan, president of ONIT. "ONIT uses the same operational platform so there will be no migration issues. Customers will also benefit from the latest software upgrade to our hosted VoIP application, which expands functionality, enhances productivity and improves the overall user experience."

ICG is the leading communications service provider in its core service areas, providing wholesale access and corporate phone and data services in Colorado and Ohio. "Our objective with this transaction was to find the best fit for our out-of-region customers," said John Scarano, ICG's executive vice president.

ONIT offers business customers a package of broadband telephony and high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent cost savings. Additionally, the company's full-featured TruVoIP solution is designed to ensure new customers experience a smooth transition from traditional PBX phone service to IP telephony without interruption to their day-to-day business operations.

ONIT Launches New Services for Business VoIP Customers

Dallas (November 7, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, has launched enhancements that expand the overall functionality and user experience of its popular VoIP telephony applications.

ONIT customers now enjoy a range of new features, including:

- Web Portal Enhancements – Including a new user interface, enhanced call log display, voice mail full alerts, Remember Me cookie-based login and support for SIP phones.
- Support for SIP Devices – Significant enhancements have been made to allow full compliance with the Session Initiation Protocol (SIP).
- Indicated Call Park – This new feature uses a combination of blinking phone buttons and extension numbers to provide call park functionality.
- Enhanced Meet-Me Conferencing – New features include the ability for a user to turn the music and announcements on or off while waiting for a conference to begin.
- Console Assistant – The Front Desk application has been replaced with an enhanced application called the Console Assistant.
- New Softphone Option – Two new softphones are available including a Plus version that offers advanced functionality.

“Our dedication to the creation of advanced communications solutions will continue to provide our customers with the ability to further streamline their organizations,” said Darren Vader, Director of Marketing for ONIT, who cites advanced applications such as feature-rich softphones, Microsoft Outlook integration, remote office support and Web-based receptionist services as the kinds of features that businesses look for to enhance productivity. “The latest enhancements to our hosted VoIP solution emphasize our commitment to ensuring that our customers continue to benefit from productivity increases that maximize revenue.”

ONIT Shows Continued Growth Trend in Q3 Results

Dallas (October 24, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, announced a quarterly recurring revenue increase of 200% over Q2 2005. With the launch of ONIT's TruVoIP Channel Partner Program, organic growth continues to gain momentum while the acquisition of American Business Phones (ABP), a provider of emerging communication solutions to business customers in Texas, helped contribute to the company's sustained growth trend. This represents ONIT's fourth consecutive quarter of triple-digit growth.

As an emerging leader in the hosted VoIP market, ONIT's growth trend continues to outpace average industry growth rates. "We continue to develop new services, attack new markets and acquire companies that match or extend our business model," said ONIT Director of Marketing, Darren Vader. "This strategy not only helps us maintain revenue growth, it also benefits our customers by allowing us to provide a range of additional services and maintain our position as an industry leader,"

"The market demand for hosted VoIP solutions such as our TruVoIP product will account for over 25% of total telephony installations over the next three years while total available market revenue is expected to reach nearly \$6 billion within four years" said Vader. "Our focus is on capturing the largest share of this market growth while continuing to provide our clients with the level of uniquely superior customer service that we have become known for."

ONIT Communications offers its customers a package of broadband telephony and high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent cost savings. Additionally, the company's full featured TruVoIP solution is designed to ensure that new customers experience a smooth transition from traditional PBX phone service to IP telephony without interruption to their day-to-day business operations.

ONIT Acquires VoIP Provider American Business Phones (ABP)

Dallas (September 30, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, announced today it has acquired American Business Phones (ABP), a provider of emerging communication solutions to business customers in Texas. ABP provides a variety of broadband solutions to customers in virtually every business segment. The acquisition gives ONIT a dense subscriber base in the Dallas area and increases its fast-growing subscriber base which accounts for a large portion of the total available business-to-business market for VoIP services in Dallas.

“Many of ABP’s customers are concentrated in large office complexes. This increases our presence in the multi-tenant technology services arena,” said ONIT chief technology officer Maurie Munro. “ONIT is a perfect fit for ABP business customers who are implementing next generation voice and data services.”

ABP customers can expect a seamless transition, according to ONIT president Kathleen Hanafan. “While VoIP is the center of our business, our core competency is in providing uniquely superior customer service. We’re focused on providing subscribers with one-on-one attention while offering the latest technological advances in emerging communication services.”

ONIT provides business customers with access to a managed IP virtual private network that delivers a comprehensive communications solution, including integrated e-mail and voicemail, online call management, free long-distance service and simplified billing. ONIT bundles broadband telephony with high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent savings over traditional communications service.

About American Business Phones (ABP)

ABP is a Dallas-based provider of emerging communication solutions offering reliable and cost effective voice and data services for customers in major metropolitan markets in Texas. ABP is dedicated to offering customers a complete range of services at a lower cost while delivering personal service. Contact info@abp.com for more information

ONIT Launches Multi-Tier TruVoIP Channel Partner Program

ONIT Communications, Inc., today announced the launch of its multi-tier channel partner program to help value-added resellers (VARs), service providers (xSPs) and virtual telecom operators profit from the explosive demand for business VoIP services.

Boston (September 21, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today announced the launch of its multi-tier channel partner program to help value-added resellers (VARs), service providers (xSPs) and virtual telecom operators profit from the explosive demand for business VoIP services. Along with an early lead in the SMB VoIP services market, becoming an ONIT Affiliate, Agent or Certified Master Reseller provides channel partners with sales, marketing and technical support based on sales volumes.

For resellers and service providers, joining the ONIT TruVoIP Channel Partner Program speeds entry into the explosive market for business VoIP services with distinct competitive advantages:

- Generous Commissions based on sales relative to chosen program tier.
- Higher Margins based on sales relative to chosen program tier.
- Greater Account Control and value-add to customers.
- Higher Customer Retention with subscribers less likely to defect from providers offering converged voice, application and data services.
- Extensive support from ONIT.

"ONIT's new TruVoIP Channel Partner Program offers value-added resellers and service providers across multiple sectors the tools they need to successfully sell and voice-over-ip technology services for business," said Patrick Hall, ONIT national sales director. "We will see a huge growth spurt over the next 12-18 months – this is a perfect time to become a member of our new channel program and profit greatly from massive growth in business-to-business VoIP services."

The ONIT Channel Partner Program offers three levels of participation addressing the individual goals of each channel partner:

- TruVoIP Affiliate: Our entry-level referral program.
- TruVoIP Agent: Offers higher commissions for experienced service providers who can participate in the selling process.
- TruVoIP Certified Master Reseller: Partners meeting Certified Master Reseller requirements and handle new accounts from contact-to-contract as well as meet minimum quota requirements receive premium commission and maximum sales and marketing support.

"The ONIT TruVoIP Channel Partner Program offers resellers and service providers a cost effective way to enter the VoIP market and build a real revenue stream with minimal investment," says Darren Vader, the company's Director of Marketing. "We expect the SMB VoIP market to absolutely explode over the next 18 months. Our TruVoIP Channel Partner Program enables member partners to profit from this huge opportunity by offering our feature-rich TruVoIP suite of communication tools to businesses that are looking for productivity solutions that will help them grow revenue."

Through the ONIT TruVoIP Channel Partner Program, partners in good standing can utilize unique sales and marketing tools designed to promote a reseller's own brand including:

- Web Seminars hosted by ONIT under the partner's company brand.
- "TruVoIP University" seminars promoting lead-generation.
- Lead Sharing Program (LSP) allowing partners to share lead opportunities with ONIT for increased pre-sale and technical support.
- TruVoIP Channel Partner Web Portal providing access to sales and marketing materials and other tools to increase pre-sale and technical support.

"Our partners have the ability to leverage ONIT's strong product offering and take advantage of the rapidly growing voice-over-IP market. The TruVoIP Channel Partner Program allows members to add a significant element to their business while adding value by providing advanced telephony applications to their customers," said Hall . "Developing strong partner relationships is a key strategy that will allow ONIT to increase time-to-market and strengthen our growing leadership position in the VoIP space. The new program will move ONIT into new vertical markets and open new sales opportunities while providing a profit center for our TruVoIP Channel Partner Program participants."

ONIT Attends Fall VON Conference - Offers Industry Insight

VON Expo Offers Proof That Enterprise VoIP is Ready for Prime Time
Boston (September 19, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, announced today it will participate in the Fall 2005 VON (voice on the net) Conference taking place September 19-22 in Boston. With over 350 speakers across four days including breakout sessions offering industry insight and answers to strategic and technical issues, the VON Conference is the leading industry event for VoIP.

Consumer VoIP adoption rates have been extremely high and continue to increase at a staggering pace. The consensus among vendors and service providers on the VON exhibit floor is that a similar rate of adoption is beginning to occur among small and medium businesses (SMBs). As proof of this impending growth many VON exhibitors have announced new products, new licensing models, lower price points and more feature rich products aimed at attracting the smaller enterprise customer.

“VoIP has incorporated all the necessary functionality to replace traditional TDM phone service. The technology is ready to meet the needs of day to day business, provided enterprise businesses engineer their networks to accommodate VoIP,” said ONIT chief technology officer Maurie Munro. “Engineering of the SMB LAN is critical and while attending VON 2005, it is very evident that the technical options needed for engineering the most effective network are now readily available. This years VON expo offers proof that Enterprise VoIP is ready for prime time”

Not only are the technical options for pure VoIP deployment now readily available, but service providers know how to solve the needs of the SMB market, according to Darren Vader, ONIT Director of Marketing. “The consensus among service providers in attendance at VON makes it clear that, as an industry, we are offering unique IP-based business productivity software as our core products – this is the key to attracting the SMB.” ONIT offers much more than a simple telephone service according to Vader, “We offer a suite of feature-rich business productivity applications that help our customers grow their business – including web-based call management, advanced call conferencing, virtual and remote office support, robust auto attendant and front desk receptionist applications.”

About ONIT Communications

ONIT Introduces TruVoIP Packaging and Service Plans

New Features and 'A La Carte' Pricing Enable Increased Plan Flexibility
Dallas (August 24, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today introduced TruVoIP – a new set of service packaging and pricing plans that include advanced telephony applications and offer 'a la carte' services that enable increased plan flexibility.

"ONIT TruVoIP is a feature-rich suite of voice and data services that help our customers grow their business and minimize expense by delivering broadband telephone services including web-based call management, free long distance, high-speed internet connectivity and advanced VoIP applications," said Darren Vader ONIT Director of Marketing. "TruVoIP enables the mobile workforce while providing a hassle-free transition from traditional PBX systems to an affordable voice-over-ip solution."

The TruVoIP service is also available in a 'plus' version that includes an advanced feature set, according to ONIT national sales director Patrick Hall. "TruVoIP+ is aimed at giving businesses a feature rich option that emphasizes our commitment to providing the latest in emerging communication technology while ensuring our customers continue to benefit from productivity increases that maximize revenue. We expect TruVoIP to become our most successful service offering to date."

ONIT TruVoIP packages start at \$37.95 per month and include features such as four digit dialing, caller ID, music on-hold, station-to-station dialing, voicemail and free long distance. ONIT TruVoIP+ packages start at \$44.95 per month including advanced features such as web-based call management (Web Portal), Find Me-Follow Me, time of day call routing, voicemail-to-email and more. ONIT also offers an 'a la carte' menu of services including custom auto attendant recording, advanced auto attendant functionality, fax forwarding and advanced Meet-Me Conferencing.

ONIT Launches Enhanced Online Support Center

ONIT Communications, Inc. today announced it has extended its technical support services to include new web-based support tools. Dallas (August 15, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today announced it has extended its technical support services to include new web-based support tools. Enhancements to the web-based ONIT Support Center include the ability for customers to search the company's online knowledge base, rate the helpfulness of online articles, submit trouble tickets, and track the status of previously submitted trouble tickets.

"These new features have allowed ONIT to further streamline the process of supporting the needs of our customers," said ONIT chief technology officer Maurie Munro. "By providing our customers with a self-service portal as a point of first contact we have increased the speed at which we can respond to their needs. Trouble tickets are automatically distributed and escalated based on priority – whether they come into the system via the Support Center, email or phone."

The Support Center enhancements emphasize ONIT's reputation for providing uniquely superior customer service, according to Darren Vader, ONIT Director of Marketing. "We set response time targets to ensure our customers receive timely solutions that exceed their expectations. Our customers want to know their issues are being worked on, and they can now track the current status of issues online -- 24 hours a day, 7 days a week."

ONIT provides business customers with access to a managed IP virtual private network that delivers a comprehensive communications solution, including integrated e-mail and voicemail, online call management, free long-distance service and simplified billing. ONIT bundles broadband telephony with high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent savings over traditional communications service.

About ONIT Communications

ONIT Communications provides hosted VoIP solutions to business customers worldwide. ONIT TruVoIP leverages a powerful Internet Protocol (IP) network combined with IP telephony applications and superior service to offer integrated, feature-rich voice and data communication services at an affordable price. ONIT TruVoIP delivers a flat-rate broadband telephony service that includes web-based call management, simplified billing, free long distance, and high-speed Internet connectivity. ONIT Acquisition Strategy Helps Triple Q2 Revenue

Acquisition Strategy Results in 300% Revenue Increase Over Q1 2005
Dallas (July 26, 2005) – Dallas-based ONIT Communications, Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, announced a quarterly recurring revenue increase of over 300% through the second quarter of 2005. Organic growth remained strong while the acquisition of Tel West Network Services Corporation (Tel West) select VoIP corporate customers in Texas and the customers and network assets of Intur.net, Inc. helped contribute to the largest quarterly recurring revenue increase in the company's history. This represents ONIT's third consecutive quarter of triple-digit growth.

As an emerging leader in the hosted VoIP market, ONIT has grown its subscriber base ten-fold through the first half of 2005. "Our position as a market-leading hosted VoIP provider continues to solidify," said ONIT Director of Marketing, Darren Vader. "Our acquisition strategy is providing growth in areas that extend our ability to provide a full range of services to our small and mid-size business customers." According to Vader, this range of services includes a variety of VoIP solutions, as well as web hosting, server co-location, and hosted email services.

"As the market demand for Voice over IP services continues to grow, we will see a convergence of like-services. VoIP is on the forefront of the next communication revolution and it's happening now" said Vader. "Traditional IP service providers, such as web hosting companies and ISP's are beginning to struggle with their efforts to provide more sophisticated voice services. ONIT is in a position to work with these organizations to provide their customers with our affordable advanced VoIP services while extending additional services to our current customers."

ONIT Communications offers its customers a package of broadband telephony and high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent cost savings. Additionally, the company's customized software solution is designed to ensure that new customers experience a smooth transition from traditional PBX phone service to IP telephony without interruption of day-to-day business operations.

About ONIT Communications

ONIT Communications provides hosted VoIP solutions to business customers worldwide. The company leverages a powerful Internet Protocol (IP) network combined with IP telephony applications and superior service to offer integrated, feature-rich voice and data communication services at an affordable price. **ONIT Acquires Customers and Assets of Texas-based ISP Intur.net,
Enhancing Profile Within an Increasing Number of Business Segments**

Dallas (June 24, 2005) – Dallas-based ONIT Communications Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, today announced it has acquired the customers and network assets of Intur.net, Inc., an Internet service provider (ISP) targeting corporate clients throughout Texas. Intur.net, a wholly owned subsidiary of Superwire, Inc. (PINKSHEETS: SUPW), Inc., provides a variety of broadband Internet solutions to customers in virtually every business segment. ONIT's acquisition strategy, coupled with strong organic growth, is enhancing its profile within target industries, making it one of the industry's fastest-growing VoIP providers.

Superwire is selling Intur.net to focus on providing exclusive "triple play" services – voice, data and video – to resort and retirement communities throughout the country, according to Tighe Merelli, CEO of Superwire. "Intur.net's corporate customers in Texas are small to medium-sized businesses with high-demand communications needs, which make them a perfect fit for ONIT. Many of them are enjoying rapid growth, so one of our goals in finding a suitable buyer was to ensure these loyal customers continue to receive the quality of service and technical expertise they need to continue to grow their businesses."

ONIT understands the customers and can offer them much more in terms of meeting their overall communications needs, including outstanding customer support says Kathleen Hanafan, president of ONIT. "Intur.net has been providing Texas corporations integrated voice and data services for the past nine years. Most of these are savvy business customers who were already considering VoIP. Now they have the opportunity to make a seamless transition to our VoIP platform, which is completely compatible with Intur.net's infrastructure, and enjoy great features at very competitive prices."

"ONIT's strategy of acquiring corporate customers from telecom-related companies undergoing organizational realignment is an ideal way to introduce hosted VoIP," said C. Douglas Bauer, ONIT's executive chairman. "Typically, the customers already understand the technology, are keen to explore the potential cost savings and are encouraged by ONIT's reputation for converting communications systems without interrupting service."

ONIT provides business customers a managed IP virtual private network that delivers a comprehensive communications solution, including integrated e-mail and voicemail, online call management, free domestic long-distance, competitive international rates and simplified billing. ONIT bundles broadband telephony with

high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent savings over traditional communications service.

About Superwire

Superwire, Inc. (PINKSHEETS: SUPW) provides broadband local loop solutions, including high-speed Internet, local telephone and long distance to office buildings, MDU tenants and individual subscribers by provisioning next generation broadband access and transport technologies directly to the subscribers. Superwire's business model capitalizes on the economics derived through the provision of convergent voice, data and video services over a single telecommunications access facility. For more information, please visit www.superwire.com or contact Edward G. Hart at (866) 547-8737.

Onit Acquires Tel West's VoIP Corporate Customers in Texas

Dallas (May 23, 2005) – Dallas-based ONIT Communications Inc., a provider of enhanced Voice over Internet Protocol (VoIP) services to business customers worldwide, announced today it has purchased from Tel West Network Services Corporation (Tel West) select VoIP corporate customers in Texas. The acquisition adds a mix of small and mid-sized businesses, Fortune 1000 companies and municipal government agencies to ONIT's fast-growing subscriber base.

Tel West (www.telwestservices.com), a Seattle-based CLEC, purchased Texas assets from a Denver-based CLEC earlier this year, including a national VoIP product, in a move to expand its facilities-based integrated voice and data network into the Texas market. To date, Tel West is operating in five Texas markets and is currently focused on providing metropolitan fiber and next-generation telephony that enables wireline phone calls to connect to IP networks.

"ONIT is a perfect fit for these VoIP business customers," said Jeff Swickard, president of Tel West. "Our primary objective in finding a buyer was ensuring these valued corporate customers would receive personal attention and outstanding quality of service. ONIT has established a reputation for delivering both."

Tel West business customers can expect a seamless transition, according to Kathleen Hanafan, president of ONIT. "ONIT uses the same operational platform so there are no migration issues. In fact, our newest business customers can expect more and better features at lower prices because VoIP is our only business. We're focused on providing subscribers the latest technological advances along with rapid response technical support."

ONIT provides business customers a managed IP virtual private network that delivers a comprehensive communications solution, including integrated e-mail and voicemail, online call management, free long-distance service and simplified billing. ONIT bundles broadband telephony with high-speed Internet connectivity for a flat rate that typically represents a 50 to 75 percent savings over traditional communications service.

Additionally, the company's customized software solution is designed to ensure customers transition from traditional PBX phone service to IP telephony without interrupting day-to-day business operations. ONIT also offers onsite training and maintains a back-up tech support team in each of its major metro markets.

About Tel West

Tel West is a Seattle-based CLEC offering reliable and cost effective voice and data services for customers in major metropolitan markets in Texas and Washington. The company's services include local dial tone, Internet access, Virtual Private

Networking (VPN), web hosting, email and integrated voice and data services delivered from Tel West's metropolitan fiber network. Tel West is dedicated to offering customers the complete range of services that larger carriers provide at a lower cost while delivering the personal service only a smaller company can offer. Visit www.telwestservices.com for more information.
